

Business Administration

Professors

Learning Outcomes:

Upon completion of this course, students will be able to:

1. Complete complex financial analyses, including calculation of appropriate ratios and preparation of common size statements, related to assigned case scenarios dealing with adequacy of working capital, sustainable growth, reasonability of sales forecasts and similar topics.
2. Calculate the cost of capital for both private and public corporations using data from cases and from publicly available financial reports in order to identify the most appropriate variables for the calculation.
3. Apply net present value techniques in complex capital budgeting case scenarios in order to evaluate and justify capital investment decisions.
4. Based on best practices, evaluate capital structure decisions in case scenarios dealing with topics such as dividend policy, share repurchase decisions, impact of changing leverage and optimal capital structure.
5. Using Excel as a tool, develop models of free cash flow forecasts and use these models to evaluate various scenarios in assigned business cases.
6. Apply specified techniques in cost of capital calculations and free cash flow modeling to valuation decisions associated with assigned cases related to private equity investments, mergers and acquisitions and IPO valuations.
7. Integrate complex financial analysis within a broader framework of strategic analysis.
8. Present verbal and written case presentations based on the standards provided.

Course Objectives:

This course will cover the following content:
